

INNOVATION. **PROTECTION.** *SUSTAINABILITY.*

CretePro Waterproofing technology by Alchemco offers a catered solution to diverse concrete projects. Once applied, it is trafficable, minimizing downtime and ensuring efficient project completion. By fortifying the concrete from within, CretePro Waterproofing prevents damage from water causing deterioration, and other common issues, ultimately reducing the need for frequent maintenance and repairs. Our experts ensure each application meets the highest standards of precision and reliability. Alchemco delivers comprehensive, customized solutions to meet the unique needs of every client, ensuring peace of mind and long-lasting structural integrity.

Our subsurface waterproofing membrane helps increase the durability & sustainability of concrete structures; adding years to their service life. Because it forms a layer of protective gel below the surface (inside the concrete), this waterproofing system cannot be damaged or deteriorate, delaminate, or blister. The result is the concrete slab and reinforcement bars now have long-term protection from weather & harmful chemicals. This translates to significant time and cost savings over the lifespan of the structure. Ideal for a wide range of applications including roofs, balconies, water features, planters, swimming pools, and ponds, CretePro stands out as a versatile and reliable choice.

1

CretePro Ultra

Straightforward application, CretePRO Ultra is tailored for a diversity of projects to avoid extensive and expensive repairs and maintenance. Original spray applied formula for subsurface membrane waterproofing.

2

CretePro Ultra Plus

Fast & Easy application time designed for owners without having to undergo timely and costly upkeep and maintenance. This spray applied subsurface barrier does not change the appearance of your concrete structure.

3

CretePro FasTrac

CretePRO Fastrac is the ideal solution for versatile waterproofing. Fastrac is great for applications over occupied space such as balconies, concrete roofs, planters, pools, and water features.

4

CretePro Masonry Sealer

CretePRO Masonry Sealer protects against water and chemical intrusion in highly porous materials like brick. This formula protects by filling the cracks, pores, and voids within the mortar joints from water, freeze-thaw, and contaminants.

5

Complete Tailored Systems

Alchemco understands every concrete structure is different. We cater our systems to fit your concrete to protect better and longer.

ENZYME MODIFIED SUBSURFACE WATERPROOFING

Alchemco is revolutionizing the concept of 'long-term' concrete waterproofing solutions. Structures with a lifespan of 50-100 years deserve more than 5-10 years of product protection. We are setting industry standards with technology that ensures sustainability and reliability for decades, not just years.

Our Waterproofing Systems are specified by the best Architects & Engineers and applied by professional factory-trained and certified Contractors supervised by Alchemco's Field Technical Team.
